

RENANCE

FEDERAL UNIVERSITY OF PETROLEUM RESOURCES, EFFURUN

CYB 102 — Past Questions & Materials
by Renance

Course: CYB 102
Institution: Federal University of Petroleum Resources, Effurun
Papers in this pack: 1
Levels: 100

This study pack was compiled and restructured by Renance for CYB 102 students at Federal University of Petroleum Resources, Effurun. It brings together 1 past paper(s)/material(s) into one clean, readable document so you can revise without chasing scattered PDFs. Practise these same questions interactively on Renance with instant answers, AI explanations, and full CBT mock exams — over 235,000+ questions across JAMB, Post-UTME, WAEC, NECO and university courses.

Digital content protection techniques...

There are several of them

1. Encryption: use to protect Digital content by converting it into code which has to be decified with decryption key
2. Digital right management: it control how Digital content is used,shared and accessed
3. Water marking: embeddes identifiable content into Digital content and trap distribution
4. Fingerprinting: it asigns a unique id to trap content
6. Digital signature: it verify the authenticity of Digital content

Ethical,legal and technical issues in digital content protection.....

Ethical issues:::

1. Authorship and ownership: determining

Authorship right for Ai generated content such as art work or music raises concern about Authorship.

2. Balancing protection and access: wide or broad intellectual property protection can deprive innovation and limit access to essential goods and services.

3. Fair use and user rights: Digital Rights Management (DRM) are technological protection measures can restrict legit users examples research and education.

4. Bias and fairness: ensuring technological advancement and decision making are fair and unbiased

5. Privacy and Data protection: it involves the balancing the need of data collection with individual Privacy

6. Accountability and responsibility: determining who is accountable for the consequences for technological advancement is responsible and ensuring that responsibility is assigned

Technological issues::

1. Cyber security threats: protecting intellectual property from cyber threat such as hacking and Data breaches is important

2. Digital Privacy and infringement: the internet facilitate wide spread intellectual property infringement making it difficult to track and enforce rights
3. Blockchain and intellectual property management: blockchain offers potential solutions to intellectual property management right it offers potential solutions for intellectual property management it also prevent challenges such as inter- operatability and regulations by ensuring that different tech systems can communicate and work together differently. These challenges highlights the need for regular discussions, innovation and collaboration to address the complex issues arising from technological advancement.
4. Rapid technological advancement: keeping pace with the rapid technological advancement such as AI, blockchain, and IOT
5. Patent trools: a patent trool is a derogatory terms for an individual or company that acquires patents not to develop or use the patented invention but to profit or threatening others for Patent infringement an individual or company that acquire patents solely for integration and linsening fees can restrain.
6. Open source and collaborative development:

balancing open source principles with IPP can be complex.

7. Data privacy and intellectual property: regulations like GDPR (general data protection regulations) impact how companies manage and protect intellectual property related to personal data

Legal issues:::

1.globalisational, jurisdictional issues: intellectual property law varies across countries making enforcement complex especially in digital environment where content can be accessed worldwide

2. Adapting to new technologies: existing laws maybe not be equipped to handle emerging technologies such as AI,Blockchain there by requiring update and adaptation

3. International cooperation: harmonizing intellectual property law globally is essential to address the challenges of inconsistencies to guarantee effective protection

4. Regulatory frame works: navigating complex evolving regulatory landscape particularly in the area of data protection.

5. Liability and accountability: determining liability in cases of technological failure and malfunction and ensuring accountability is assigned
6. Intellectual property protection: protecting intellectual property rights in rapid changing technological environment

Case studies of Digital content protection bridges....

Data bridges:

1. Yale new heaven hegel health data breach 2025
Over 5 million demographic data was exposed due to an unauthorized access to a network sever
2. Power school breach 2025
Over 60 million students and 9 million teachers sensitive information was exposed when hackers exploited a single compromised credentials
3. National public data breach 2024
Over 2 billion records were stolen including sensitive information where stolen such as social security numbers affecting nearly all Americans
4. At&t breach 2024

Is a senerio where hackers stole data on over 100 million data customers including call logs and text records.

5. Facebook breach 2021

Where over 500 million users data was scraped including names, phone numbers, account name and passwords these breach shows how vulnerabilities in systems can lead to significant data exposure

Copyright and infringement and piracy prevention....

Refers to the strategic and measures taken to protect creative works such as music, arts, software and literature to prevent recreation

Techniques for preventing copyright information

1. Digital right management (DRN)
2. Digital water marking
3. Fingerprinting
4. Content monitoring
5. Take down notices
6. linsening agreement

7. Copyright Regus
8. Education and awareness
9. Industry collaboration
10. Technical protection measures
