GEY 203 — Past Questions & Materials  
**by Renance**

---

Course: Gey 203  
Institution: Federal University of Petroleum Resources, Effurun  
Papers in this pack: 1  
Levels: 200

---

This study pack was compiled and restructured by Renance for Gey 203 students at Federal University of Petroleum Resources, Effurun. It brings together 1 past paper(s)/material(s) into one clean, readable document so you can revise without chasing scattered PDFs. Practise these same questions interactively on Renance with instant answers, AI explanations, and full CBT mock exams — over 235,000+ questions across JAMB, Post-UTME, WAEC, NECO and university courses.

# Paper 1 of 1 — GEY 203 Introduction to petrology

Level 200 • First Semester • PastQuestion

This source paper is a scanned document; its pages are reproduced below.

9/4  
 cos/2923/2019  
**FEDERAL UNIVERSITY OF PETROLEUM RESOURCES, EFFURUN**  
  
**DEPARTMENT OF EARTH SCIENCES**  
**SECOND SEMESTER EXAMINATION 2018/2019 SESSION**  
**GLY 224/223 - Igneous and Metamorphic Petrology** **Time Allowed: 2hrs 30mins**

**INSTRUCTIONS: ANSWER QUESTION 1 AND ANY OTHER THREE QUESTIONS**

1. Write short notes on the following
  - a. Unicomponent magma *centric magma* (3 Marks)
  - b. Bi-component magma *solvent magma* (12 Marks)
  - c. Igneous fabric *mixed crystal / solid solution* (5 Marks)
2. Differentiation is an important factor in bringing about diversity in igneous rocks.  
  
*Discuss* (15 Marks)
3. Discuss the possible petrochemical conditions that underlie the reaction between magma and wall rock during magmatic assimilation. (15 Marks)
4. What is metamorphism? Distinguish between regional and contact metamorphism giving examples (15 Marks)
5. a). Attempt the Classification of the following rocks based on their texture (example, coarse-grained (phaneritic), fine-grained Aphanitic), porphyritic, glassy, vesicular and pyroclastic)  
 Granite, Rhyolite, Granite Porphyry, Obsidian, Pumice, Scoria, Basalt porphyry, Andesite Porphyry, Basalt, Andesite, Gabbro, Diorite, Andesite Porphyry, Granite Porphyry, Peridotite, Komatite. (15 Marks)
6. Mineralogical composition of igneous rocks is made into Granitic (felsic), Andesitic (Intermediate), Basaltic (Mafic) and Ultramafic. Attempt the classifications of the listed rock types in question 5 based on dominant and accessory minerals. (15 Marks)
